Hyperbaric Oxygen Therapy (<http://o2xy-wellness.com>) Can Help Nervous System Disorders Like Parkinson's

The central nervous system is what allows people to walk without worrying about stumbling. It also controls the movement features of the face and aids in many bodily functions that most would take for granted. For people that suffer from Parkinson's disease though, the central nervous system is damaged and many sufferers find that movement capability gradually goes away. Friends and family will begin to look for alternative treatments such as hyperbaric oxygen therapy treatments that will help those that are stricken with this unkind disease. Hyperbaric oxygen therapy can help nervous system disorders like Parkinson's in the area of memory loss and nerve damage.

For memory loss associated with Parkinson's disease, many people feel obligated to focus care on routine medical treatment solely devoted to prescription drug treatments because they were ill advised by non-medical types. Many Parkinson's sufferers are unaware of the state of the art treatments being found through hyperbaric oxygen therapy. Hyperbaric oxygen helps the nervous system by replenishing vital oxygen in pure form to body tissues where Parkinson's disease or stroke has damaged nerve endings. Hyperbaric oxygen therapy is innovative technology that many afflicted with Parkinson's disease had tried and believe is a godsend. Researchers have found that the nerve endings that cause tremors associated with Parkinson's disease responded incredibly well to hyperbaric oxygen treatments. When the patient's nervous system is saturated with pure oxygen, many families have noted that the healing response is tremendous.

Hyperbaric oxygen therapy can be accomplished at medical treatment facilities around the world. The hyperbaric chamber is comfortable and many activities can be done while the oxygen treatments are being administered. Dozing is allowed during treatments and this in itself is reason to relax and let the healing process begin. In the high-oxygen environment, there is moderate pressure and nerve endings seem to have no other recourse but to let healing cycle to continue. Immediate results vary with each individual. Many will feel enlightened and euphoric after the first treatment and this is due to the rich oxygen environment. A smile might be the first indication that the therapy is working as promised, or the arms might swing again when the patient walks.

The healing process will be virtually unnoticeable for some patients if they are in the advanced stages of the disease, but with repeated sessions, it is expected that impressive improvements will be seen. Hence, the need for multiple hyperbaric oxygen treatments. This timetable is normal when such damage occurs because the central nervous system is a complex matrix of nerve endings. Parkinson's disease causes joints to seize up and become unresponsive. The central nervous system will respond quicker in some patients and slower in others. As the nervous system disorder is introduced to the renewed flux of oxygen many changes will occur to damaged areas of the body. Many people are grateful for this innovative, cutting edge technology.

Hyperbaric Oxygen Chambers Hyperbaric Oxygen Therapy helps Autism, Cerebral Palsy, MS, Parkinsons, Athletic Performing, healing of wounds, used as immune defense and much more. Visit our site at o2xy-wellness.com (<http://o2xy-wellness.com>) to learn more.
